MUCH ACTIVITY IN LOON CREEK

Clarence E. Eddy Tells of Developments in Idaho Gold Camp.

SALT LAKE CAPITAL HAS ACHIEVED SUCCESS

Numerous Towns Are Springing Up as Extraction of Gold Progresses.

After a summer's campaign in the hills of Idaho, Clarence E. Eddy, who is down from Loon creek, is spending a few days in the city, preparatory to starting on a trip of exploration through Nevada. Mr. Eddy, who is gratified by the results thus far attained in the development of the properties in which his interests lie. speaks enthusiastically of the progress made in the Loon creek district during the past few months, a district that is largely being developed through the medium of Salt Lake talent and capital.

Smelter Acts as Stimulus.

Smelter Acts as Stimulus.

The building of a 100-ton smelter by the Lost Packer operators, says Mr. Eddy, is one of the important factors in hastening the growth of the region. Nearly all of the material for the plant is now on the ground, and work is being rushed with the intention of beginning operations at the earliest possible date. There are numerous properties in the section which while not so rich as those that have been the means of bringing capital into the country, will yet prove profitable so soon as the opportunity for treatment before shipping is afforded.

Good Boads Constructed

Good Roads Constructed.

Many new and good roads have been constructed during this season, affording operators a means of getting in supplies and machinery at a much lower cost than prevailed during the first year after the discovery of the Lost Packer by Mr. Eddy, the discovery which brought about the development of the district. The Lost Packer, says the operator, has now certainly passed the prospect stage and ought soon to enter upon the payment of dividends.

Strike in the Cash Box.

Of the Cash Box property, the mines to which Mr. Eddy is now devoting his attention, he reports the opening up of a two-foot vein of ore carrying profitable gold values, with six inches of very high-grade rock, assays from which show gold values up to \$400 per ton. Mr. Eddy also learns that on Parker mountain, thirty miles northeast of Loon creek, an important development has been made on property held under bond by Sait Lake operators, and a force of ten miners is now taking out ore and exploring the ground.

Is Going Into Nevada.

Mr. Eddy is preparing to make a three months' trip along the proposed line of the Western Pacific, and will during the week fit out an expedition with the end in view of carefully examining the mineral resources of the country. He believes that the road, which he considers of paramount importance to Salt Lake, will open much mineral territory now too far from transportation idellities to be thoroughly explored.

ADVANCE IN COPPER.

Indications Are That Red Metal Will Climb Steadily.

With more buyers than seilers in evidence, it is little wonder that the price of the red metal should climb steadily higher, says Ores and Metals. The demand for spot delivery increases constantly, and this, of course, is what has caused prices to advance. Spot delivery, when the de-

to advance. Spot delivery, when the demand is greater than the supply, and production is behind, is the cause of the elevation in price. That this condition will continue there is no reason to doubt.

In the first place, while all the producers are being crowded to the limit, there is no accumulated stock of copper from which to draw—the metal produced goes to fill orders that have been standing for a considerable time, and spot delivery is only possible where an advance in price warrants the seller in holding back orders of prior date.

Agents for buyers are increasing in number. The competition is keen—the interest grows from day to day and those who are watching the market have witnessed lake and electrolytic climb over the fis-cent mark—go to 15% cents a pound and renew the dream of 17-cent metal.

The price is precious close to that point now—and there are some who predict a runaway market.

Whether that condition will be reached

The price is precious close to that point now—and there are some who predict a runaway market.

Whether that condition will be reached or not, however, will not result in immediately increasing the production. Just now production exceeds development and there must come a time when the pendulum must swing the other way—when the supply must be shorter.

With that staring one in the face comes the realization that the uses to which the red metal are put increases day by day. The old producers have reached the limit of the output, so one must look to the new companies for an appreciable increase in the supply of copper. And in this respect every effort is being made in all the copper mining sections to force the work on those mines where ore is just beginning to be opened, in order to get them on a producing basis. But it takes time to open copper—just as it does to build up a business. But, because of this attractive feature, increasing price and limited supply, owners of likely or partially developed mines are crowding the work in order to realize at the earliest possible moment the profits that may be taken down from the sale of this highly recessary metal. Should the Oriental demand for copper continue and should the buyers be as aggressive in the future as they have been in the past—that is, to the extent of overbidding competitors, copper is likely to go to a fancy figure.

AMERICAN FLAG MEETING.

Former Officials are Unanimously Re-

elected. At the annual meeting of the American Fing Mining company held yesterday in Park City, practically all of the outstanding stock was represented in person or by proxy. The board of directors was unantmously re-elected as follows: President and treasurer, T. F. Singiser of Sait Lake, vice-president, R. G. Brooks of Scranton, Pa.; secretary, E. B. Palmer of Sait Lake; George P. Holman of Sait Lake and George H. Rathman of Sioux City, Ia. It is expected that the directors will meet during the week and re-elect the officers as stated.

as stated.

After the meeting the stockholders inspected the new hoist which has recently
gone into commission and which is pronounced one of the best in the camp.

for "Nee"

TONOPAH MINES NEED ADDITIONAL SMELTERS

Well-Known Nevada Mining Man Tells of Difficulties Operators Meet.

Despite the splendid record already made by Tonopah in the output of gold, the building of smelters for the treatment of the silicious ores from its mines will greatly increase the totals of the product says Charles O. Snyder, general manager

says Charles O. Snyder, general manager of the Western Ore Purchasing company's sampling mills, who is in from Nevada for a conference with the local management of the American smelters.

Mr. Snyder is confident that given proper smelting facilities, the mines of Tonopah should within a year furnish an output of 25,000 tons of ore per month, but until there are smelters enough to handle the silicious ores the output must be curtailed. The completion of the Garfield plant of the American Smelting and Refining company will, in Mr. Snyder's opinion, have a beneficial effect upon the district, as will also the placing in commission of the United States Mining company's big plant in Shasta county, California.

Mr. Snyder is couelly enthusiastic over

formin.

Mr. Snyder is equally enthusiastic over the outlook at Goldfield and confidently expects that the opening of the cool scason will bring thousands of new faces into the region, of which so much has lately been said.

THE DAY ON 'CHANGE.

New York Takes a Long Slide Down Toboggan.

Despite the fact that Sunday and a holiday Monday intervened since the last call, the week on the mining stock exchange opened with a declining market, New York being the leading trader and

New York being the leading trader and suffering the greatest decline. The totals of the day footed up 9400 shares, for which purchasers checked out 33192 12, with the bulk of the transactions in the lew-priced stocks.

New York was handed out rapidly and in good-sized bunches, opening at 33 cents in the morning and reaching the level of 271; cents before the close of the final call, more than 7000 shares being shoved over the counter.

Lower Mammoth commanded 30 cents

Court the counter.

Lower Mammoth commanded 30 cents for 500, but moved up a notch during the day, while Uncle Sam Con, reached the 354 mark. Another Tintic stock in the selling was May Day at 394 cents and an order for 200 Yankee Con, was filled at 32 cents. Grand Central put 50 over at an even 33, and Wabash of Park City sold 200 at 31.70, the day and call closing with quotations and sales as they follow:

SECOND-CLASS ORE RUNS \$1000 A SACK

Field of Amazing Promise Opened Up in State of Nevada.

By Fitz Mac.

OLINGHOUSE, Nev., Sept. 5 -Appreclate the possibilities of the Olinghouse country as a mining field one must reflect that it lies in the Virginia range, and that the Virginia range has produced the greatest bonanzas ever opened in the United States

The range is a short one and not very elevated—only a little exceeding 8000 feet at its highest point. Virginia peak, in the Olinghouse district. Beginning a little above the head of Pyramid lake at the north, it terminates in Mount Dayldson at its southern end.

Contains Comstock Lode.

Contains Comstock Lode.

Mount Davidson contains the great Comstock lode whose famous bonanzas of long-departed glory are credited with an output of over \$450,000,000.

The output of the Comstock lode followed by the enormous output of Leadville, changed the financial history of the world by leading to the international demonetization of silver.

But the Virginia range contains the great Comstock lode, therefore the universal output of the Virginia range changed the financial history of the world.

This, of course, is an argument that

world.

This, of course, is an argument that appeals rather to the imagination than to the judgment in considering the possibilities of the Olinghouse country, but it appeals, that's the point.

Olinghouse Country.

The Olinghouse Country is nearly thirty miles north of Mount Davidson, and the mineralization of the two districts may have no geological relation.

That they may not have is true, but it is much more probable, from geological considerations, that they have, for the range is eruptive in all its substance throughout its whole length, and in all itselfhood it was produced throughout its whole length by the same cosmic impulse within the same limits of time.

These considerations strongly suggest a within the same limits of time.

These considerations strongly suggest a likelihood at least of some broad analogies in any two or more camps in the range as to the richness of their mineralization.

That is as far as the argument can, without absurdity, be carried. Every mining camp must stand on its own bottom. No two are ever likely to be found just alike.

Virginia Range.

Virginia Range.

The Virginia range is mapped on the reconnaissance chart of the United States geological survey as consisting of a single fine-grained eruptive throughout, which proves that it has only been reconnoitered by survey north of Mount Davidson in the most casual way, not studied in detail, for here in the immediate vicinity of Olinghouse camp it is such a complex of cruptives from coarse-grained to fine-grained as one seidom comes upon in so limited a space—rhyolites, trachytes, andesites and phonolytes in their distinct types and in every modification of the types, and nearly all are strongly porphyritic with felspar; only slightly with hornbiende or anyte.

anyte.

The phonolyte, here as in Cripple Creek, appears to be the most general mineral carrier, though the gold is not associated here as at Cripple Creek with tellerium. To the depth reached it is all practically free, though it will probably be associated with sulphides at depth.

Remarkable Ore.

Remarkable Ore.

The consideration that gives a practical importance to these facts is that in the Buster group of the Oilinghouse district—the Buck Ingalls property—the richest gold ore ever dug out of the ground in Nevada in so large a quantity ore that ran \$33 a pound by the sackfulls, was mined, till mining was stopped by litigation with the Southern Pacific Railroad company, which claims the ground by patent from the United States under its land grant. But as the land grant expressly reserved all mineral lands from the grant and the patent was obtained after the region was known to be mineralized and mines in it opened and operating. Buck Ingalls is not likely to lose his very valuable property, and beyond the annoyance of delay and expense he is not sweating a hair over the railroad company's patent.

The mine is nailed un now and armed.

pense he is not sweating a hair over the railroad company's patent.

The mine is nailed up now, and armed men are guarding some scores of sacks of "second-grade" ore stored on the ground that only runs \$100 the sack. The "rich" ore was all removed before litigation began—when it was only menaced.

One of Many Rich Mines.

One of Many Rich Mines.

The Buster mine was the richest mine ever opened in the district, but by no means the only rich mine. The group owned and operated by the Springfield-Nevada company is a fine property, and carries a good deal of high-grade ore. The Ora group, including J. H. Sheehan's Crown Point claims, is now owned by Pittsburgers, and is being developed systematically under the management of C. H. Bovee, and is piling up a big lump of good-grade ore. Having plenty of funds to carry out its scheme of development, it is not under the necessity of rushing every last sackful to the market to keep the ghost walking.

Texas-Nevada Property.

Texas-Nevada Property.

Texas-Nevada Property.

The Texas-Nevada company, under the management of O. M. Pudor, is likewise doing systematic development, regardless of production, on No. 2, which Mr. Pudor recently purchased for the company, for \$22,000. The old Green Hill property, which has been operated for several years by Mr. Olinghouse, after whom the camp is named, is now taking out \$100 a day on soft and easy ore that averages \$20, with a little five-stamp mill. There is a paucity of water for milling in Olinghouse canyon at this season of the year, and this is the only mill just now operating, but the camp contains four little mills—the rest being Huntington's—which in a modest and unostentations way have ground out nearly a million dollars in the last few years.

Was Long Unnoticed.

Was Long Unnoticed.

Was Long Unnoticed.

It is quite astonishing that a camp of such fine promise and so high a grade of free-milling ore should have remained almost unnoticed by the world abroad till Buck Ingalis, after a slege of typhold fever, during which he had a "hunch" or a dream, or something of that sort, went out with his prospector's sack and pick one afternoon, still almost too weak to walk, and made himself a millionaire in the time a cat would be licking her ear, by discovering the Buster, with its astounding wealth of gold lying but half an inch under the surface. The next day he went back with his two brothers, and, sitting on a hassock dug up \$15,000 worth of gold with his prospector's pick, and the news of that set Wadsworth and Reno affame, and presently six or seven hundred prospectors swarmed in and staked the whole country for fifteen miles up the range to the northward from camp Olinghouse.

It is all a promising country, but of

MORE "VELVET" PASSED OUT BY DALY WEST

Quarterly Dividend of \$108,000 Is to Be Paid September 15.

At the regular quarterly meeting of the Daly West interests, held during the day, the dividend of 60 cents per share, a total of \$108,000, was declared, payable on the 15th inst. to stockholders of record on the

While the management pleads that ther s nothing new in the line of develop ments, it is generally understood in the street that the mine is in splendid shape, and that in addition to the development of much new territory containing satisfactory values, the company continues to add to its already large reserve fund. September promises to figure high up among the months of the year as a distributer of dividends, as a number of the properties which make their distribution quarterly will fall into line before the month is out.

BOSTON, Mass. Sept. L. Stocks were in good demand and better prices were seen all around. There was an absence of the uneasiness of last week and more buying orders made their appearance through commission houses. Few stocks were found offering and prices moved easily. The closing was steady.

Ores and Bullion.

Ore and bullion settlements for the day amounted to \$15,500, McCornick & Co. reporting them as they follow: Gold, silver, lead and copper ores, \$25,700; base bullion, \$37,900; gold bars, \$12,500. In the metal market silver advanced to 62 cents per ounce, copper moved up to 15% cents per pound, while lead recorded a gain, being quoted at \$3,50 and \$4.85 per cwt.

Mr. Eccles Coming.

S. W. Eccles, traffic manager of the American Smelting and Refining com-pany, will stop in the city for a few hours today to consult with General Man-ager Whiteley of the local points. He is en route to New York.

pected.

Olinghouse canyon, in which is located Camp Olinghouse, lies nine miles northwest of Wadeworth and thirty miles northeast of Reno, in township 21 north, range 23 east, Mt. Diablo meridian, on the east flank of the Virginia range.

he east flank of the trigger scored. The mountain is deeply scored canyons to the north of Ollnghouse, they all give upon the desert of the Truckee River valley, about ten miles wide. From Olinghouse northward they occur in the following order. Frank Free canyon, Tiger. White Horse, Defiance, Wild Horse, Secret. Big Mouth, Coal and

None north of Olinghouse contains any-

In White Horse Canyon.

White Horse canyon contains but one mine, the Emma L. which is an old location and has had considerable development. Is has been worked this summer and quite a quantity of ore is sacked and ready for shipment.

The Pritchard & Dahl, a recent location or Secret canyon is said to be a mine.

ready for shipment.

The Pritchard & Dahl, a recent location in Secret canyon, is said to be a mine already, but I did not visit it.

Big Mouth canyon has every superficial indication of being a great mineral country, and numerous very promising prospects are being worked in a small way, with good showings by the pan, but no ore-body of importance has yet been opened. On a running inspection it looks a region of amazing promise. It has been a district center of volcanic activity, and the country, which is very broken and precipitous, is traversed by numerous strong dikes, some of which show from a trace to fair values by the pan throughout and high values in spots.

There is no constant water for milling in any of the canyons north of Olinghouse till Coal and Anderson canyons, at the north end of the range, are reached. In these are nice little mill streams. But there are springs all along the mountain that furnish ample water for camping purposes, and there is plenty of cedar and mountain mahogany everywhere for camp use, and altogether it is an easy and pleasant country to prospect, and the water is excellent and the climate simply ideal.

Let no one be surprised to hear of big

deal.

Let no one be surprised to hear of hig discoveries in the Olinghouse-White Horse country, for it is a mineralized region and positively known to be very righly mineralized in places, and it is in the Virginia range, which has produced the greatest bonanzas ever opened in the United States.
